23	LIQUIDITY COVERAGE RATIO(%)		166.75

<sup>\*</sup> The average weighted and unweighted amounts are calculated taking simple average based on daily observation for the quarter (71 observations)

### Qualitative disclosures with regard to LCR

W.e.f. 1st January 2015, the Bank has implemented guidelines on Liquidity Coverage Ratio (LCR) as directed by Reserve Bank of India.

]The LCR standard aims to ensure that a bank maintains an adequate level of unencumbered High Quality Liquid Assets (HQLA) that can be converted into cash to meet its liquidity needs for a 30 calendar day time horizon under a significantly severe liquidity stress scenario. At a minimum, the stock of liquid assets should enable the bank to survive until next 30 calendar days under a severe liquidity stress scenario.

$$LCR = \frac{\text{High } \mathbf{Q} \text{uality Liquid } \mathbf{A} \text{ssets (HQLA)}}{\text{Total net cash outflows over the next 30 calendar days}}$$

#### Here.

- HQLA comprises of level 1 and level 2 assets, in other words these are cash or near to cash items which can be easily used / discounted in the market in case of need.
- Net cash outflows are excess of total outflow over total inflow under stressed situation as defined by Basel / RBI. While arriving at the net cash outflow, the inflows are taken with pre-defined hair-cuts and the outflows are taken at predefined run-off factors.
- In case stressed inflows are more than the stressed outflows, 25% of total outflows shall be taken as total net cash outflows to arrive at the LCR.
- With effect from 01.01.2015, Banks were required to maintain minimum 60% LCR on an ongoing basis. The same has reached 100% as on 01.01.2019 with incremental increase of 10% each year.

	01/01/2015	01/01/2016	01/01/2017	01/01/2018	01/01/2019	01/04/2020	01/10/2020	01/04/2021
Minimum LCR	60%	70%	80%	90%	100%	80%	90%	100%

However, in order to accommodate the burden on bank's cash flow on account of COVID 19 pandemic, RBI vide circular no DOR.BP.BC.No.65/21.04.098/2019-20, dated April 17, 2020 permitted Banks to maintain LCR as under:

From date of Circular to September 30, 2020 = 80% Oct 1, 2020 to March 31, 2021 = 90% April 1, 2021 onwards = 100%

Main Drivers of LCR: The main drivers of the LCR are adequacy of High Quality Liquid Assets (HQLA) and lower net cash outflow on account of higher funding sources from retail customers. Sufficient stock of HQLA helped the Bank to maintain adequate LCR.

**Composition of HQLA:** The composition of High Quality Liquid Assets (HQLA) mainly consists of cash balances, excess SLR, excess CRR, Securities under MSF and FALLCR (Facility to Avail Liquidity for Liquidity Coverage Ratio).

The composition of HQLA as on date of disclosure is given below:

Cash in hand	1.99%
Excess CRR balance	3.97%
Government securities in excess of minimum SLR Requirement	
Government securities within the mandatory SLR Requirement, to the extent	
of allowed by RBI under MSF (presently to the extent of 2 percent of NDTL	8.44%
as allowed for MSF)	
Marketable securities issued or guaranteed by foreign sovereigns having 0%	
risk weight under Basel II standardized approach and other securities	5.85%
adjustments on account of Repo/Reverse Repo transactions	
Facility to Avail Liquidity for Liquidity Coverage Ratio	
Level 2 Assets	2.13%

**Concentration of funding sources**: Majority of Bank's funding sources are from retail customers & small business customers therefore the stressed outflows are comparatively lower. Bank does not have significant funding concentration from any counterparty.

**Derivative Exposures and potential collateral calls:** Bank has very little exposure in derivative business which is not very significant.

**Currency mismatch in the LCR:** In terms of RBI guidelines, a significant currency is one where aggregate liabilities denominated in that currency amount to 5 per cent or more of the bank's total liabilities. In our case, USD is the only significant currency.

**Description of the degree of centralization of liquidity management and interaction between the group's units:** The liquidity management of the Bank at enterprise level is a Board level function and a separate sub-committee of the Board (R.Com.) keeps close watch on that. The periodical monitoring of the liquidity management is being monitored by the ALCO on regular intervals. The entire liquidity management process of the Bank is being governed by ALM Policy of the Bank.

The liquidity management for domestic operations is the central function, being managed at Head Office level. The overseas liquidity management is being handled at each centre, jurisdiction wise to keep close monitoring and control and also to comply with the local regulatory requirements as well.

Items to be reported in the 'no maturity' time bucket do not have a stated maturity. These may include, but are not limited to, items such as capital with perpetual maturity, non-maturity deposits, short positions, open maturity positions, non-HQLA equities, and physical traded commodities.

## Qualitative disclosures with regard to NSFR

The objective of the Net Stable Funding Ratio (NSFR) is to promote the resilience of bank's liquidity risk profiles and to incentivize a more resilient banking sector over a longer time horizon. The NSFR will require banks to maintain a stable funding profile in the form of Capital & liabilities in relation to the composition of their assets and off-balance sheet activities.

NSFR is defined as the amount of available stable funding relative to the amount of required stable funding.

$$NSFR = \frac{Available \ Amount \ of \ Stable \ Funding \ (ASF)}{Required \ Amount \ of \ Stable \ Funding \ (RSF)} \geq 100\%$$

RBI issued the regulations on the implementation of the Net Stable Funding Ratio in May 2018 with minimum requirement of equal to at least 100%. The implementation is effective from 1st October, 2021. NSFR is computed at Bank's standalone and consolidated level.

Available Stable Funding (ASF) is defined as the portion of capital and liabilities expected to be reliable which is determined by various factors/weights according to the nature and maturity of liabilities viz. liabilities having maturity of 1 year or more receiving 100% weight.

Required Stable Funding (RSF) is defined as the portion of on balance sheet and offbalance sheet exposures which requires to be funded on an ongoing basis. The amount of such stable funding required is a function of the liquidity characteristics and residual maturities of the various assets held.

### **Brief about NSFR of the Bank**

The main drivers of the Available Stable Funding (ASF) are the capital base, retail deposit base, and funding from non-financial companies and long-term funding from institutional clients. The capital base formed around 10%, retail deposits (including deposits from small sized business customers) formed 70% and wholesale funding formed 6% of the total Available Stable Funding, after applying the relevant weights.

The Required Stable Funding primarily comprised lending to corporates, retail clients and financial institutions which constituted 63% of the total RSF after applying the relevant weights. The stock of High-Quality Liquid Assets which majorly includes cash

Classification: Internal

and reserve balances with the RBI, government debt issuances attracted no or low amount of stable funding due to their high quality and liquid characteristic. Accordingly, the HQLA constituted only 2% of the Required Stable Funding after applying the relevant weights. Other assets and Contingent funding obligations, such as committed credit facilities, guarantees and letters of credit constituted 33% of the Required Stable Funding.

Bank has maintained comfortable stable funding buffers with Available Stable Funding at consolidated level of Rs.599,126 Cr against Rs.427,928 Cr of Required Stable Funding, resulting in a consolidated NSFR of 140.01% as on 30th September, 2022.
